Experience

Xenova Rush 2020 | Now

Currently developing Xenova Rush, a competitive multiplayer game featuring fast-paced melee combat and advanced parkour movement.

I designed and programmed every aspect of the game: client prediction, server reconciliation, authoritative physics, automatic server scaling in AWS...

The project demonstrates my ability to design distributed systems, optimize real-time networking, and deliver a complete product across backend, frontend, and game architecture.

Siemens 2023 | 2024

As **Software Engineer**, I worked adding and supporting features to the backend and frontend for rail automation systems, with focus using the most strict guidelines for passenger safety, as it is crucial in this sector.

I used technologies like Java, Typescript, Angular, Node.js, MongoDB, Jenkins, Doors... Etc.

Projects 2016 | 2023

I've always been creating things just out of curiosity or to solve problems I find interesting.

Over the years, I've built a torrent system, web apps with custom servers running in the cloud, small Android applications, and automation/scraping tools for the web along data analysis.

About me

I'm currently living in Spain and looking for remote work opportunities. I'm available and have a very flexible schedule, ready to adapt to different time zones and project needs.

🚗 Driving License 🌐 Available for traveling 📅 Flexible schedule

Education

Telematics Engineering in Telecommunications

Polytechnic University of Cartagena (Cartagena, Spain) | 2020
